

Diagnosis in Heritage Science

1. Focus on modern and contemporary art

The Summer School “Diagnosis in Heritage Science” is designed to train graduated students, in particular PhD students, with interests in Heritage Science. The school aims at providing students from different educational backgrounds (graduates in the fields of technical-scientific and humanistic) the specific skills to start and develop projects for proper diagnosis and conservative management of Cultural Heritage. The primary objective is to provide the students with a theoretical and practical preparation, combining in-depth knowledge of materials and diagnostic techniques, and the ability to interpret issues and problems in the context of multidisciplinary projects. Each year the School will be dedicated to a different topic within Heritage Science. In 2018, the school will be focused on modern and contemporary art.

Aim: Providing the students with a theoretical preparation, combining in-depth knowledge of materials and diagnostic techniques, and the ability to interpret issues and problems related to the characterization of the object in the context of multidisciplinary projects.
